Claim 1 and its dependent claims 2-9 are allowable over the prior art of record. The closest prior art Tsai et al. (U.S. Patent No. 6,450,475), to be discussed below in more detail, discloses a platform adjustment device for a scanner, but Tsai et al. does not disclose the claimed document surface micro-adjust mechanism as claimed.

Claim 1 requires that the carrier chassis encloses the transparent document platform and has a through-hole, and that an elastic element disposed between the carrier chassis and a latching structure, which is attached to the casing of the scanner and has a locking hole that corresponds in position to the through-hole in the carrier chassis located in the upper section of the casing of the scanner.

The closest prior art Tsai et al. also discloses a through-hole in the upper case (20 in Figs. 2, 3A and 3B) and a stud (12) having a locking hole that corresponds in position to the through-hole of the upper case (20). However, Tsai et al. does not disclose an elastic element disposed between the upper casing and the support (13), and the upper case (20) does not enclose the transparent platform (30 in Figs. 2, 3A and 3B).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
